

THE PEOPLE BEHIND THE GAME

Complex change. Practical systems.

Evolution Cloud Services, Inc. helps organizations turn strategy into working technology. Our team works across advisory, implementation, data, and digital products.

Advisory

Strategy, operating models, and technology decisions.

Implementation

Enterprise platforms, integrations, and deployment.

Data & analytics

Business data, reporting, and actionable insight.

Digital products

Custom software, integrations, and AI/ML solutions.

A GAME BY

CRITICAL LOAD

RUSH HOUR

Keep the good things moving.

Build a brilliant little network.
Rescue friendly requests.
Find your flow.

FREE / OFFLINE / STRATEGY

Every request is counting on you.

Friendly packets lose health along the route. Help them reach the exit in good condition; stop corrupted traffic before it disrupts the network.

IN-GAME CAPTURE / MEADOW CAMPUS

1 Read the briefing.

Campaign > choose a mission > Deploy. Check its waves and goals.

2 Build, then dispatch.

Select a tower and a compatible pad. Let construction finish, then Start wave.

3 Keep the flow healthy.

Deliveries earn credits. Use them to extend coverage and prepare for the next wave.

Every tower has a purpose.

Ten families work together. Research unlocks new options and three generations of equipment.

Quick + GPU

Restore friendly request health. Quick suits light work; GPU helps heavier loads.

Power + UPS

Supply the network and store reserve energy. UPS output and duration are limited.

Cooling + ECC

Manage equipment heat and clear faults from friendly requests.

Firewall + Gateway

Stop corrupted packets and support traffic, retries, and available alternate routes.

Cache + Maintenance

Speed friendly transit and dispatch automatic, paid equipment repairs in range.

Think one wave ahead.

Good networks need more than towers. Leave room for power, cooling, recovery, and your next upgrade.

01 Pause to think.

Pause stops traffic and construction. Resume to finish builds, upgrades, and repairs.

02 Check your headroom.

Watch spare power and heat. Charge UPS before an outage and keep credits for repairs.

03 Grow through Research.

Complete mission objectives to earn research points, then unlock new equipment and tiers.

FIRST-MISSION FIELD TIP

Follow the highlights: add a second Quick near the exit, then a third before wave 2.

6 regions. 24 missions. 12 contracts.

A little strategy. A whole world to explore.
